BOOKS

Benjamin, R. 2022. ***Viral Justice: How We Grow the World We Want.*** Princeton University Press.

Using personal anecdotes, academic research, and case studies, this book emphasizes the impact of small actions against systemic inequality. Artificial intelligence is interwoven throughout the book as the author examines the structures that perpetuate and amplify biases and injustices.

Benjamin, R. 2019. ***Race After Technology: Abolitionist Tools for the New Jim Code.*** Polity.

Artificial intelligence is examined to highlight its role in perpetuating racial hierarchies and systemic discrimination. Countering the misconception of technology's neutrality and superiority, the author uses case studies in predictive policing, hiring algorithms, facial recognition, and surveillance systems to illustrate AI's discriminatory effects and to provide context for opportunities toward more equitable technology.

Broussard, M. 2018. ***Artificial Unintelligence: How Computers Misunderstand the World.*** Mit Press.

Drawing on examples and case studies ranging from self-driving cars to the public school system, this book seeks to highlight the limitations of technology and how we can best make informed choices about when and how to apply it. Starting with the basics of computer programming and the concept of techno-chauvinism, the author discusses issues that arise when computers do not work properly or inadequately solve problems, and concludes with how technology can be used to best benefit the needs of all people.

D'Ignazio, C., & Klein, L. F. 2023. ***Data Feminism****.* The MIT Press.

Challenging traditional power structures and the notion that data is neutral, this book presents a paradigm shift in conceptualizing data science and data ethics through the lens of intersectional feminist theory. Using the questions of: data science by whom, data science for whom, and data science with whose interests in mind as a guide, the authors provide a framework on how feminist principles can serve as a guide toward analyzing and developing more equitable and inclusive technologies.

Crawford, K. 2020. ***Atlas of AI: Power, Politics, and the Planetary Costs of Artificial Intelligence.*** Yale University Press.

This book explores the impact of artificial intelligence (AI) on society, politics, and the environment. Focusing on a critical analysis of AI, the author provides insights into the contradictions and misperceptions of AI to highlight its role in amplifying inequality.

Eubanks, V. 2018. ***Automating inequality: How high-tech tools profile, police, and punish the poor.*** St. Martin's Press.

Arguing that the most invasive and punitive systems are aimed at the poor, this book systematically investigates the impacts of data mining, policy algorithms, and predictive risk models. Using case studies to highlight how emerging technologies serve to perpetuate and exacerbate historical inequalities and create an illusory ethical barrier that effectively shields decision-makers from moral responsibility, the author argues for social workers and policymakers to use a more thoughtful and critical approach to its implementation.

Hao, K. (2025). ***Empire of AI: Dreams and nightmares in Sam Altman's OpenAI*****.** Penguin Group.
An astonishing eyewitness view from both up in the command capsule of the new economy and down where the real suffering happens, *Empire of AI* pierces the veil of the industry defining our era.

Hill, A., & Shaw, I. 2011. ***Social work and ICT***. Sage Publications.
This book explores the history of social work and the use of information and communication technologies. It also reviews the reciprocal relationship between the two and how this might influence future use.

McIlwain, C. D. 2019. ***Black software: The Internet and racial justice, from the AfroNet to Black Lives Matter*****.** Oxford University Press, USA.

This book examines the intersection between technology and race, highlighting the role of Black technologists in the early stages of the internet and providing space and context for representation of Black Culture, while also contributing to the oppression of this group since the 1960s.

Mollick, E. (2024). ***Co-intelligence: Living and working with AI*****.** Penguin.

From Wharton professor and author of the popular One Useful Thing Substack newsletter Ethan Mollick comes the definitive playbook for working, learning, and living in the new age of AI

Noble, S. U. 2018. ***Algorithms of Oppression: How Search Engines Reinforce Racism.*** NYU Press.

This analysis into the pivotal role of search engines in reflecting and perpetuating systemic racism and sexism, aims to dispel the myth of technological neutrality.The author discusses the mechanisms behind these biases, including search engine optimization, profit motives of tech companies, and historical discriminatory characterizations, to foster awareness and promote reform.

Shane, J. 2021. ***You Look Like a Thing and I Love You: How Artificial Intelligence Works and Why It's Making the World a Weirder Place.*** Voracious.

Infused with levity in its examples and anecdotes, this book provides an approachable guide on the capabilities and limitations of artificial intelligence (AI). Key themes include an exploration of how AI works, various applications, quirks and limitations, and challenges and ethical concerns.

Susskind, R., & Susskind, D. 2022. ***The future of the professions: How technology will transform the work of human experts*****.** Oxford University Press.

Addressing a concern among professionals and organizations, this book offers guidance on adapting to artificial intelligence to remain relevant and valuable. Key themes include the changing nature of various professions, democratization of knowledge and expertise, new platforms and systems for service delivery, and ethical implications. Reflecting on who should own and control knowledge, and what tasks should be reserved exclusively for people, the authors provide models that help tackle these important questions and provide ways to view the changes as an opportunity rather than a threat.

Tambe, M., & Rice, E. (Eds.). 2018. ***Artificial intelligence and social work*****.** Cambridge University Press.

This book offers an examination of the transformative impact of artificial intelligence on the social work profession, stressing its role as a complement to human expertise rather than a replacement. Providing a balanced overview of opportunities and challenges, the authors use case studies to illustrate its potential to enhance service delivery and administrative efficiency, while addressing ethical implications.

Ward, A. S., & Bruce, A. 2022. ***The Tech That Comes Next: How Changemakers, Philanthropists, and Technologists Can Build an Equitable World*****.** Wiley.

This book explores the potential of technology as a catalyst for creating a more equitable and unbiased society. With a theme around the role of technology in society, the authors provide inspiration on its use to

More on the creative commons license: click here.

promote positive social change. Recommendations on collaborating with different stakeholders, case studies to illustrate key principles, and strategies for addressing potential implementation concerns are explored.

ORGANIZATIONS WORTH FOLLOWING

AI For Education: Provide AI literacy training to 1 million educators and lead the responsible adoption of Generative AI in the education ecosystem, empowering teachers and ultimately improving student outcomes while preparing them for the future.

Algorithmic Justice League: The Algorithmic Justice League's mission is to raise public awareness about the impacts of AI, equip advocates with resources to bolster campaigns, build the voice and choice of the most impacted communities, and galvanize researchers, policymakers, and industry practitioners to prevent AI harms.

All Tech is Human Founded in 2018 and based in Manhattan with a global community, All Tech Is Human (ATIH) is a non-profit organization that has intentionally brought together a diverse range of individuals and organizations across civil society, government, and industry. ATIH works to grow the Responsible Tech field by promoting knowledge-sharing and collaboration among multiple stakeholders to co-create a better tech future. ATIH events are free and open to the public.

Berkman Klein Center: The Berkman Klein Center's (BKC) mission is to explore and understand cyberspace; to study its development, dynamics, norms, and standards; and to assess the need or lack thereof for laws and sanctions. BKC's is a research center, premised on the observation that what they seek to learn is not already recorded. BCK brings together the sharpest, most thoughtful people from around the globe to tackle the biggest challenges presented by the Internet. It is an interdisciplinary, university-based center with a global scope.

Center for Humane Technology Together with our partners, we are dedicated to leading a comprehensive shift toward technology that strengthens our well-being, global democratic functioning, and shared information environment. The Center's mission is to align technology with humanity's best interests.

Center for Technology & Democracy The Center for Democracy & Technology (CDT) is the leading nonpartisan, nonprofit organization fighting to advance civil rights and civil liberties in the digital age. CDT shapes technology policy, governance, and design with a focus on equity and democratic values. Established in 1994, CDT has been a trusted advocate for digital rights since the earliest days of the internet.

Data & Society Data & Society is an independent nonprofit research organization. Data and Society's work foregrounds the power of the people and communities most impacted by technological change. They study the social implications of data, automation, and AI, producing original research to ground informed public debate about emerging technology. Their research includes studies on machine learning, AI systems, algorithmic impact, the future of work, and building trustworthy online infrastructures. This research offers evidence to counter the notion that technology is the best or only solution to the host of societal challenges we face, and our communications, policy, and engagement work applies and amplifies those findings.

Design Justice Network The Design Justice Network (DJN) is a home for people who are committed to embodying and practicing the Design Justice Network Principles. DJN wields collective power and experiences to bring forth worlds that are safer, more just, more accessible, and more sustainable. We uplift liberatory experiences, practices, and tools, and critically question the role of design and designers. Rooted in a sense of abundance, possibility, and joy, we provide connection, care, and community for design justice practitioners.

Mozilla Foundation Mozilla's work is guided by the Mozilla Manifesto. Founded as a community open source project in 1998, Mozilla currently consists of two organizations: the 501(c)3 Mozilla Foundation,

More on the creative commons license: click here.

which leads our movement building work; and its wholly owned subsidiary, the Mozilla Corporation, which leads our market-based work. The two organizations work in close concert with each other and a global community of tens of thousands of volunteers under the single banner: Mozilla.

Pew Research Pew Research Center is a nonpartisan fact tank that informs the public about the issues, attitudes and trends shaping the world. It conducts public opinion polling, demographic research, content analysis and other data-driven social science research. They do not take policy positions.

Therapists in Tech Therapists in Tech is a virtual organization and online community supporting mental health experts in tech to help them thrive. Additionally, they help mental health professionals to transition into corporate and start-up life. Therapists in Tech is working to build a global community promoting the development of ethical digital mental health leaders through authentic connections, upskilling, mentoring, training, and inclusion.

DAIR Institute: DAIR is an interdisciplinary and globally distributed AI research institute. Its ethos is informed by the belief that AI is not inevitable, its harms are preventable, and when its production and deployment include diverse perspectives and deliberate processes it can be beneficial. DAIR research reflects the core values of lived experience and centering communities.

PODCASTS

Accidental Tech: "Three nerds discussing tech, Apple, programming, and loosely related matters." Learn more

AI: Decodes The System: "'AI: Decodes the System is a series of podcast interviews with industry experts and everyday people who help explain topics related to policy, tech, data, and law in plain language." Learn more

Artificial Intelligence & Equality Podcast: "AI: Decodes the System is a series of podcast interviews with industry experts and everyday people who help explain topics related to policy, tech, data, and law in plain language." Learn more

Data and Society: "Presenting timely conversations about the purpose and power of technology that bridge our interdisciplinary research with broader public conversations about the societal implications of data and automation. For more information, visitdatasociety.net." Learn more

Life With Machines - PodcastBaratunde Thurston
Life With Machines explores the human side of the A.I. revolution – the good, the bad, and the weird – and asks, "How can these machines help us become more human?"

Mozilla & IRL: "Online life is real life, and with artificial intelligence it's getting even more real. In Season 6, IRL zooms in on data, machine learning and algorithms, as host Bridget Todd shares real life stories from around the world about AI. This season doubles asMozilla's 2022 Internet Health Report which explores who is reclaiming power to make online life healthier for everyone." Learn more

Mystery AI Hype Theater 3000: Artificial Intelligence has too much hype. In this stream, linguist Prof. Emily M. Bender and sociologist Dr. Alex Hanna break down the AI hype, separate fact from fiction, and science from bloviation. They're joined by special guests and talk about everything, from machine consciousness to science fiction, to political economy to art made by machines. Learn more

Pivot: "Every Tuesday and Friday, tech journalist Kara Swisher and NYU Professor Scott Galloway offer sharp, unfiltered insights into the biggest stories in tech, business, and politics. They make bold predictions, pick winners and losers, and bicker and banter like no one else. After all, with great power comes great scrutiny. From New YorkMagazine and the Vox Media Podcast Network." Learn more

More on the creative commons license: click here.

Rabbit Hole: “What is the internet doing to us? The Times Tech columnist Kevin Roose discovers what happens when our lives move online.” Learn more

The Radical AI Podcast: “Our mission is to center radical ideas in a world transformed by technology through engaging, collaborative, and accessible media. Using dialogue and storytelling we seek to probe and advance the field of Artificial Intelligence Ethics.” Learn more

Regulate Tech: “I want to share my ideas on subjects I have been thinking about for many years becauseI believe I have something interesting today. And I hope they will be a useful contribution to what are very live political debates. (There is also some spirit of“aesthetic enthusiasm” but this may be expressed more in my endless fiddling with the tech platform than in the words I use).” Learn more

The Sunday Show: “Tech Policy Press is a nonprofit media and community venture intended to provoke new ideas, debate and discussion at the intersection of technology and democracy. The Sunday Show is its podcast.” Learn more

Tech’d Up: “What’s happening right now on the frontlines of tech? Silicon Valley veteran Niki Christoff hosts zippy conversations about trending technology with experts, enthusiasts, regulators, policymakers, CEOs, and reporters. New episodes drop every other Thursday.” Learn more

TBD: Technology by Design: “A podcast devoted to exploring the tech industry, the products and policy decisions that shape it, and its impact on our everyday lives. Join Matt Perault, the director of theCenter of Science & Technology Policy at Duke University, as he hosts guests from all corners of the industry." Learn more

Tech Policy Grind: “WashingTech's Tech Policy Leaders is a tech policy podcast featuring interviews with the most authoritative voices in technology policy and digital transformation. Tech Policy Leaders sheds light on how technology policy, law, and media regulations affect all of us at such a crucial moment in world history.” Learn more

Trust in Tech: “The Trust in Tech podcast is a project by the Integrity Institute — a community driven think tank advancing the theory and practice of protecting the social internet, powered by our community of integrity professionals.” Learn more

Two Think Minimum: "Podcast of the Technology Policy Institute of Washington, D.C. The Technology Policy Institute is a think tank that focuses on the economics of innovation, technological change, and related regulation in the United States and around the world.” Learn more

Untangled: '“Untangled is a podcast about technology, people, and power. Hosted by Charley Johnson.” Learn more

WSJ Tech News Briefing: "Tech News Briefing is your guide to what people in tech are talking about. Every weekday, we’ll bring you breaking tech news and scoops from the pros at the Wall Street Journal, insight into new innovations and policy debates, tips from our personal techteam, and exclusive interviews with movers and shakers in the industry." Learn more

Your Undivided Attention: “In our podcast, Your Undivided Attention, co-hosts Tristan Harris and Aza Raskin Explore the incredible power that technology has over our lives — and how we can use it to catalyze a humane future" Learn More..

ACADEMIC ARTICLES | GENERAL SOCIAL WORK & AI ARTICLES

Garkisch, M., & Goldkind, L. 2024. **Considering a Unified Model of Artificial Intelligence Enhanced Social Work: A Systematic Review.** *Journal of Human Rights and Social Work*, 1-20.

More on the creative commons license: click here.

This systematic review of artificial intelligence (AI) research within the social work field highlights the gap in empirical research. Also included is a discussion of the opportunities and risks AI could bring to the profession at the professional, agency, and client levels.

Goldkind, L. 2021. **Social work and artificial intelligence: Into the matrix.** *Social Work*, *66*(4), 372-374.

As a unifying call, this editorial implores social work professionals to engage in the expanding artificial intelligence (AI) potential and its applications, providing concrete opportunities with examples and potential risks.

Hodgson, D., Watts, L., & Gair, S. 2023. **Artificial Intelligence and Implications for the Australian Social Work** Journal. *Australian Social Work*, *76*(4), 425-427.

This editorial reviews the impact of artificial intelligence (AI) on the social work profession, including education, practice, and research.

Jacobi, C. B., & Christensen, M. 2023. **Functions, Utilities and Limitations: A Scoping Study of Decision Support Algorithms in Social Work.** *Journal of Evidence-Based Social Work*, *20*(3), 323-341.

This literature review of algorithms, machine learning (ML), and artificial intelligence (AI) in the social work field outlines the functions, utilities, and limitations of applying these technologies to decision-making within the profession.

Meilvang, M. L. 2023. **Working the Boundaries of Social Work: Artificial Intelligence and the Profession of Social Work.** *Professions and Professionalism*, *13*(1).

This article eExplores the unique challenges of artificial intelligence (AI) in social work by reviewing research articles from within the field in Denmark. Demonstrating how the act of analysis is influenced by the profession's current values and attitude towards AI, the author also highlights how this has the power to shape the future of AI in the profession.

Molala, T. S., & Mbaya, T. W. 2023. **Social Work and Artificial Intelligence: Towards the Electronic Social Work Field of Specialisation.** *International Journal of Social Science Research and Review*, *6*(4), 613-621.

This literature review on the relationship between artificial intelligence (AI) and social work leads to the recommendation of an electronic social work specialization to guide the safe and ethical use of AI, including how that might be established through education programs, and policies and guideline development.

Reamer, F. G. 2023. **Artificial Intelligence in Social Work: Emerging Ethical Issues.** *International Journal of Social Work Values and Ethics*, 52.

This literature review examines the current uses of artificial intelligence (AI) within social work and behavior health professions and associated ethical implications. The author then provides a framework for responsible integration of AI in the field.

Robila, M., & Robila, S. A. 2020. **Applications of artificial intelligence methodologies to behavioral and social sciences.** *Journal of Child and Family Studies*, *29*, 2954-2966.

This article pProvides an examination of artificial intelligence (AI) applications in the behavioral and social sciences, focusing on three main areas where AI has been successfully applied. These areas are in diagnosing and predicting conditions, increased understanding of human development and functioning, and effective data management.

Seniutis, M., Gružauskas, V., Lileikiene, A., & Navickas, V. 2024. **Conceptual framework for ethical artificial intelligence development in the social services sector.** *Human technology.*, *20*(1), 6-24.

More on the creative commons license: click here.

This literature review of artificial intelligence (AI) implementations in social services provides a recommended framework for ethical and effective application. The framework includes impact on social service processes, and risks and solutions regarding ethical concerns. A case study in Lithuania is used as an example of the recommendations.

Wassal, K., Ashurst, C., Hron, J., & Zilka, M. 2024. **Reimagining AI in Social Work: Practitioner Perspectives on Incorporating Technology in their Practice.** *arXiv preprint arXiv:2407.10244*.

This qualitative study of 13 UK social workers investigates their perspectives on artificial intelligence (AI), focusing on their experience with the current landscape and challenges, potential future opportunities and concerns, and considerations for future design and practitioner involvement.

ACADEMIC ARTICLES | SOCIAL WORK, AI, & INDIVIDUAL PRACTICE

Anagnostopoulou, P., Alexandropoulou, V., Lorentzou, G., Lykothanasi, A., Ntaountaki, P., & Drigas, A. 2020. **Artificial intelligence in autism assessment.** *International Journal of Emerging Technologies in Learning (iJET)*, *15*(6), 95-107.

This article reviews the role of artificial intelligence in diagnosis of autism spectrum disorders. Machine learning, fuzzy logic, natural language processing, neural networks, and mobile applications are examined.

Biswas, A., & Talukdar, W. 2024. **Intelligent Clinical Documentation: Harnessing Generative AI for Patient-Centric Clinical Note Generation.** *arXiv preprint arXiv:2405.18346*.

To highlight the use of artificial intelligence as an administrative support tool within the social services profession, this case study explores two technologies and their synergistic potential for transforming clinical documentation practices. Using natural language processing and automatic speech recognition technologies, the authors evaluate its application for generating SOAP (Subjective, Objective, Assessment, Plan) and BIRP (Behavior, Intervention, Response, Plan) notes. The results and potential impact to the field, including improved note quality and a streamlined documentation process, but also confidentiality concerns and incorporation of bias, are reviewed.

Dekker, I., De Jong, E. M., Schippers, M. C., De Bruijn-Smolders, M., Alexiou, A., & Giesbers, B. 2020. **Optimizing students' mental health and academic performance: AI-enhanced life crafting.** *Frontiers in Psychology*, *11*, 1063.
This literature review explores the combined use of digital therapy and online life-crafting intervention to support the mental health of students transitioning into higher education.

Fitzpatrick, K. K., Darcy, A., & Vierhile, M. 2017. **Delivering cognitive behavior therapy to young adults with symptoms of depression and anxiety using a fully automated conversational agent (Woebot): a randomized controlled trial.** *JMIR mental health*, *4*(2), e7785.

This study explores the feasibility, acceptability, and preliminary effectiveness of a conversation agent, Woebot, in supporting college students who self-report symptoms of anxiety and depression.

Graham, S. A., Lee, E. E., Jeste, D. V., Van Patten, R., Twamley, E. W., Nebeker, C., ... & Depp, C. A. 2020. **Artificial intelligence approaches to predicting and detecting cognitive decline in older adults: A conceptual review.** *Psychiatry research*, *284*, 112732.

This conceptual review is an examination of potential artificial intelligence options for application in neurocognitive disorders. Technological opportunities in sociodemographic data, clinical and psychometric assessment, neuroimaging and neurophysiological data, electronic health records and claims data, novel assessments, and genomic and other omic data options are discussed. The benefits and challenges with each is also reviewed.

More on the creative commons license: click here.

McNally, K., Wright, K., Goldkind, L., Kattari, S. K., & Victor, B. G. 2024. **Disability Expertise and Large Language Models: A Qualitative Study of Autistic TikTok Creators' Use of ChatGPT.** *Social Media + Society*, *10*(3), 20563051241279549.

This qualitative analysis of 25 videos from 25 different self-identified neurodivergent TikTok creators assesses their use of a Large Language Model, ChatGPT. Examination included the motivation to use ChatGPT, whether the use setting was personal or professional, application, and the impact of the ChatGPT use experience on the creators.

Negriff, S., Dilkina, B., Matai, L., & Rice, E. 2022. **Using machine learning to determine the shared and unique risk factors for marijuana use among child-welfare versus community adolescents.** *PLoS one*, *17*(9), e0274998.

Machine learning (ML) techniques are used to identify and compare risk factors for marijuana use among adolescents involved in child welfare and those from the general community. Data was analyzed using logistic regression, Least Absolute Shrinkage and Selection Operator (LASSO), and Support Vector Machines(SVM). Results show the ML models achieved a minimum of 80% accuracy in predicting marijuana use.

Rahayu, D. S., Padillah, R., Septiana, N. Z., Setyorini, S., & Nuraini, P. 2023. **Battle of the minds: AI vs mental health professionals in mental wellness care.** *Journal of Public Health*, fdad149.
This article critique expands on the limitations of AI as compared to mental health professionals, and discusses how AI technology might be best utilized.

ACADEMIC ARTICLES | SOCIAL WORK, AI, & AGENCY PRACTICE

Abdurahman, J. K. 2021. **Calculating the Souls of Black Folk: Predictive Analytics in the New York City Administration for Children's Services.** In *Column. J. Race & L. Forum* (Vol. 11, p. 75).

Using New York City's Administration of Children's Services as an illustrative example, this article challenges the traditional framework of fairness, accountability, and transparency (FAT) as inadequate in addressing the fundamental structural issues of predictive analytical models. The author contends that systemic inequalities and biases will persist unless we are willing and able to more deeply examine the structure within these technologies.

Field, A., Coston, A., Gandhi, N., Chouldechova, A., Putnam-Hornstein, E., Steier, D., & Tsvetkov, Y. (2023, June). **Examining risks of racial biases in NLP tools for child protective services.** In *Proceedings of the 2023 ACM Conference on Fairness, Accountability, and Transparency* (pp. 1479-1492).

As an examination of racial bias within Natural Language Processing (NLP) technology, this paper demonstrates how the use of artificial intelligence may amplify disparities within agency services. Using contact notes from an anonymous county's Department of Human Services, the authors first provide an analysis of possible racial disparities within the data, then highlight the results of incorporating the data into a risk predictive tool and information extraction tools.

Gillingham, P. 2019. **Can predictive algorithms assist decision-making in social work with children and families?.** *Child abuse review*, *28*(2), 114-126.

This article analyzes six current Decision Support Systems (DSS) to highlight potential challenges and recommendations for future developments that can support the decision making process in social work with children and families. The specific DSS systems analyzed are Predictive Risk Modeling (PRM), Family Screening Tool (FST), RSF Programme, an algorithm that predicts recidivism, a predictive model within a child protective system, and a DSS to identify children at risk for maltreatment.

More on the creative commons license: click here.

Kithulgoda, C. I., Vaithianathan, R., & Culhane, D. P. 2022. **Predictive risk modeling to identify homeless clients at risk for prioritizing services using routinely collected data.** *Journal of Technology in Human Services*, *40*(2), 134-156.

This study comparedCompares a trained Predictive Risk Model (PRM) against the Vulnerability Index-Service Prioritization Decision Assistance Tool (VI-SPDAT) in flagging clients at greatest risk for adversities associated with homelessness. It aAlso explores how Continuums of Care (CoC) could utilize the PRM tool, as well as study limitations and potential additional research.

Kube, A. R., Das, S., & Fowler, P. J. 2023. **Community-and data-driven homelessness prevention and service delivery: optimizing for equity.** *Journal of the American Medical Informatics Association*, *30*(6), 1032-1041.

Using data from households in St. Louis who accessed homelessness prevention or homeless services between 2009 and 2012, this study applies counterfactual machine learning to test a community-and-data-driven approach in comparison to traditional service delivery methods. In addition to community input, the researchers used Bayesian Additive Regression Trees (BART) to manage the data and estimate the probability of reentry, as well as evaluate the effectiveness of prioritization rules.

Redden, J. 2020. **Predictive analytics and child welfare: Toward data justice.** *Canadian Journal of Communication*, *45*(1), 101-111.

This literature and case study review highlights the potential issues and risks of predictive analytics. Lack of transparency, bias, risks to accuracy and reliability, stigmatization, and the limits of the data were identified as potential concerns. The article urges greater public deliberation regarding the use of predictive analytics in child welfare.

van Der Put, C. E., Gubbels, J., & Assink, M. 2019. **Predicting domestic violence: A meta-analysis on the predictive validity of risk assessment tools**. *Aggression and Violent Behavior*, *47*, 100-116.

This meta-analysis of 50 studies published between 2000 and 2018 reviews specialized risk assessment tools, general tools, and victim-partner ratings for predictive accuracy. Differences in predictive accuracy of actuarial tools and structured clinical judgment (SCJ) tools are also meta-analyzed. Potential moderators are explored for use in future development and continuous improvement of risk assessment tools in domestic violence treatment and supervision.

ACADEMIC ARTICLES | SOCIAL WORK, AI, & COMMUNITY PRACTICE

Bricout & Goldkind 2024. ***Meeting the Grand Challenge to Harness Technology for Social Good: Social Workers Support Vulnerable Community Members' Rights to Access Safe, Beneficent and Effective AI*** [Policy Brief]. Grand Challenges for Social Work.

Highlighting the concerns of artificial intelligence (AI) related to its pervasiveness, impunity, and unforeseen ramifications, this paper proposes policy recommendations to mitigate adverse outcomes. These include fostering inclusive AI policy development and implementation, prioritizing AI proficiency through education, and emphasizing person-oriented approaches.

DaViera, A. L., Uriostegui, M., Gottlieb, A., & Onyeka, O. 2024. **Risk, race, and predictive policing: A critical race theory analysis of the strategic subject list.** *American Journal of Community Psychology*, *73*(1-2), 91-103.

Grounded in Critical Race Theory, this article demonstrates the potential of racial bias in predictive policing tools. The authors use available data to analyze risk scores for different racial groups while controlling for confounders.

Dillard, S. 2022. **Resist, regulate, reimagine, and reinforce: How social workers can advocate for digital inclusion.** *Columbia Social Work Review*, *20*(1), 76-96.

More on the creative commons license: click here.

Reviewing the history and current use of artificial intelligence within the social work arena, this article implores the profession to engage in the technologies in order to advocate for digital inclusion through resistance, regulation, reimagination, and reinforcement.

Land, M. K., & Aronson, J. D. 2020. **Human rights and technology: new challenges for justice and accountability.** *Annual Review of Law and Social Science*, *16*(1), 223-240.

This article reviews the ways in which technologies are affecting human rights, including the emerging issues around government surveillance and harassment, the role of artificial intelligence in automated decision making, and the rise of digital governance. The authors then suggest strategies in technology design and legislation to respond to these challenges.

Lyon, D. 2017. **Digital citizenship and surveillance| Surveillance culture: engagement, exposure, and ethics in digital modernity.** *International Journal of Communication*, *11*, 19.

This article explores the history of surveillance culture, how we should evaluate surveillance from ethical and political perspectives, and the possibilities and challenges it brings. It aArgues that, because digital surveillance is now a way of life, it requires our deliberate examination so we can advance what is acceptable and take necessary political and legal action on what is unacceptable.

Meijer, A., & Wessels, M. 2019. **Predictive policing: Review of benefits and drawbacks.** *International Journal of Public Administration*, *42*(12), 1031-1039.

This literature review attempts to define predictive policing, and evaluate its advantages and disadvantages. In doing so, the authors find there to be no empirical evidence to support its conceptualization, benefits, and/or limitations.

Preeya, P. 2022. **The Costs of Technology: An Analysis of the Community Concerns About the Use of ShotSpotter in Chicago.**

This thesis paper uses qualitative interview data to explore the use of ShotSpotter, a gunshot detection tool, by the Chicago Police Department. Interview findings from stakeholders, including community advocates and city officials are analyzed, along with a 2021 Office of Inspector General report to provide the suggestion that the city stop using this tool. The author also provides policy practice recommendations if the city continues their use of ShotSpotter.

Ranjit, J., Joshi, B., Dorn, R., Petry, L., Koumoundouros, O., Bottarini, J., ... & Swayamdipta, S. 2024. **OATH-Frames: Characterizing Online Attitudes Towards Homelessness with LLM Assistants.** *arXiv preprint arXiv:2406.14883*.

To aid in the understanding of public opinion, this study analyzed the ability of large language models to process dialogue with complex and nuanced perspectives on complicated social issues. A framework was developed to optimize analysis, consisting of three main components - the discovery of a framing typology, annotation of data at scale with this typology, and analysis of the collected annotations.

Young, M., Katell, M., & Krafft, P. M. 2019. **Municipal surveillance regulation and algorithmic accountability.** Big Data & Society, 6(2). https://doi.org/10.1177/20539 51719868492

This case study of the 2017 Seattle Surveillance Ordinance, as well as legislative efforts from other cities, demonstrate how municipal surveillance technologies are regulated in practice. The authors provide recommendations to improve surveillance regulation.

ACADEMIC ARTICLES | SOCIAL JUSTICE & ETHICAL ISSUES

Berridge, C., & Grigorovich, A. 2022. **Algorithmic harms and digital ageism in the use of surveillance technologies in nursing homes.** *Frontiers in Sociology*, *7*, 957246.

More on the creative commons license: click here.

Highlighting the need for more research and attention around the future use of technology on the older adult population in nursing homes, the author critically examines surveillance technologies and their contribution to ageism. Discussing algorithmic harms from critical race, feminist, and disability themes, the paper is an invitation to include ageism when assessing artificial intelligence for potential issues.

Chu, C. H., Nyrup, R., Leslie, K., Shi, J., Bianchi, A., Lyn, A., ... & Grenier, A. 2022. **Digital ageism: challenges and opportunities in artificial intelligence for older adults.** *The Gerontologist*, *62*(7), 947-955.

Acknowledging the more mainstream potential biases in artificial intelligence, this article advances the concern of ageism into the conversation. The author highlights the marginalization of older adults around technology, as well as ethical and legal implications, ending with recommendations for future research.

Goldkind, L., Wolf, L., & LaMendola, W. 2021. **Data justice: Social work and a more just future.** *Journal of Community Practice*, *29*(3), 237-256.

This article aAims to empower social workers with information and examples of the rapidly emerging artificial intelligence technologies within the field. Data justice theories and frameworks are reviewed to inspire application at the micro, mezzo, and macro levels so ethical standards can be established and enforced to better protect marginalized people and communities.

Keddell, E. 2019. **Algorithmic justice in child protection: Statistical fairness, social justice and the implications for practice.** *Social Sciences*, *8*(10), 281.

This article lLooks at the use of algorithmic tools within the child protection context, providing insight beyond the lens of statistical fairness to broader justice concepts found in its use in constructing databases and in decision-making tools. It eExplores how individuals, and the social workers that support them, can be affected due to lack of transparency and consent, and bias and limitations in the data.

Gillingham, P. 2019. **Decision support systems, social justice and algorithmic accountability in social work: A new challenge.** *Practice*, *31*(4), 277-290.

To enable social service providers to identify inequality in algorithmic decision support systems (DSS), this article highlights inherent problems within this technology through examples of current DSS systems, and then provides a set of principles to guide analysis-of and application-to DSS.

Hung, T. W., Yen, C. P. 2021. **On the person-based predictive policing of AI.** *Ethics and Information Technology,* 23, 165–176, https://doi.org/10.1007/s10676-020-09539-x

This article eExplores if people should be targeted for a crime that artificial intelligence predicts might be committed. It rReviews the different subdivisions within the predictive policing model - area-based policing, person-based policing, and event-based policing. Using examples of predictive policing within communities, it reviews the challenges, opportunities, and ethical considerations of each.

Kazim, E., Koshiyama, A. S. 2021. **A high-level overview of AI ethics.** *Patterns, 2 (9).*

Designed for the engineering field, the authors begin with a review and history of artificial intelligence (AI) and ethics. The article then details principles, processes, and values that encompass current approaches to AI ethics, as well as more engineer-centric AI themes.

Morley, J., Machado, C. C., Burr, C., Cowls, J., Joshi, I., Taddeo, M., & Floridi, L. 2020. **The ethics of AI in healthcare: a mapping review.** *Social Science & Medicine*, *260*, 113172.

This literature review of the ethics of artificial intelligence (AI) in healthcare identifies three main issues: epistemic concerns, normative concerns, and traceability concerns. The authors provide details around

More on the creative commons license: click here.

these challenges to highlight what policymakers and regulators should consider when incorporating AI into healthcare systems.

Perron, B. E., Goldkind, L., Qi, Z., & Victor, B. G. (2025). **Human services organizations and the responsible integration of AI: Considering ethics and contextualizing risk (s).** Journal of Technology in Human Services, 43(1), 20-33.

This article proposes a framework for the responsible integration of AI in human services organizations, emphasizing that ethical risks—such as displacement of professional judgment, environmental harm, model bias, and exploitation of data laborers. The authors advocate for a multi-dimensional risk assessment model that allows organizations to evaluate AI applications contextually, beginning with lower-risk uses like document classification or administrative support, and scaling up only with proper oversight. They recommend investing in empirical research, AI literacy, and organizational capacity-building to ensure ethical, effective AI adoption aligned with social work values.

Rodriguez, M. Y., DePanfilis, D., & Lanier, P. 2019. **Bridging the gap: Social work insights for ethical algorithmic decision-making in human services.** *IBM Journal of Research and Development*, *63*(4/5), 8-1.

With ethics as a central concern in the use of artificial intelligence (AI) in the social services profession, this article demonstrates a strengths-based approach to building a predictive analytic tool. Using the child welfare system as an example, the researchers examine the effect of including risk factors and protective factors in the model.

Segal, M. 2024. **Confronting and managing ethical dilemmas in social work using ChatGPT.** *European Journal of Social Work*, 1-13.

Comparing ChatGPT to the Israeli Ethics Committee's responses to ethical questions, this article assesses the ability of artificial intelligence to support ethical decision making. After reviewing the strengths and weaknesses of each, recommendations for the use of ChatGPT are presented.

van Maanen, G. 2022. **AI Ethics, Ethics Washing, and the Need to Politicize Data Ethics**. *DISO* 1(9). https://doi.org/10.1007/s44206-022-00013-3

Highlighting the current use of principles, dilemmas, and theory in the evaluation of ethics in technology, this article argues that academia must embrace a better strategy. The author highlights the use of questions to critically examine technologies, providing examples and analyzing their potential effectiveness.

Lee, J. Y., Pace, G. T., *Cha, H., Rao, S., Hahm, H. C., An, R., & Denby-Brinson, R. (2025). Commentary: ETHICS—An ethical framework for artificial intelligence (AI) use in social work research. *Journal of the Society for Social Work and Research* (Special Series on "Artificial Intelligence & Social Work"), 16(4), 699-711. https://doi.org/10.1086/739116

Introduces the ETHICS framework for ethically integrating AI into social work research. ETHICS has 6 principles: Equity, Transparency, Integrity, Collaboration, Human-Centeredness, and Safety. The article provides a description of each of these principles and application examples and ideas for adaptation and implementation of ETHICS in various social work research contexts.

ACADEMIC ARTICLES | AI IN SOCIAL WORK EDUCATION

Asakura, K., Occhiuto, K., Todd, S., Leithead, C., & Clapperton, R. 2020. **A call to action on artificial intelligence and social work education: Lessons learned from a simulation project using natural language processing.** *Journal of Teaching in Social Work*, *40*(5), 501-518.

This conceptual paper examines the use of natural language processing (NLP) in social work education. A case study is used to demonstrate the potential of NLP to expand access of simulation-based

More on the creative commons license: click here.

education, highlight the limitations of NLP, and to use the Community of Inquiry (COI) framework to emphasize recommendations to improve the learning experience for students.

Haider, S. 2024. **Exploring opportunities and challenges of artificial Intelligence in social work education.** *The Routledge International Handbook of Social Work Teaching*, 46-62.

After describing artificial intelligence and its current use in higher education, this book chapter explores the potential impact and application of artificial intelligence in social work education. It further details how it can best be adopted into academia and research, considering its fundamental opportunities and challenges.

Hodgson, D., Goldingay, S., Boddy, J., Nipperess, S., & Watts, L. 2022. **Problematising artificial intelligence in social work education: Challenges, issues and possibilities.** *The British Journal of Social Work*, *52*(4), 1878-1895.

Under a lens of ethics and interpersonal engagement in the social work profession, this article addresses the transformative approach the field's teaching models and practices must adopt to best prepare the profession for the role of artificial intelligence.

Rodriguez, M. Y., Goldkind, L., Victor, B. G., Hiltz, B., & Perron, B. E. 2024. **Introducing generative artificial intelligence into the MSW curriculum: A proposal for the 2029 Educational Policy and Accreditation Standards.** *Journal of Social Work Education*, 1-9.

Recommending a new competency indicator be added to the Educational Policy and Accreditation Standard (EPAS) for Master of Social Work instruction to reflect the advent of Generative Artificial Intelligence, this article details four skills to be developed as part of the social work curriculum. Beginning with an overview of artificial intelligence, the authors then review the benefits and challenges of incorporating this technology into social work education and practice before concluding with the recommended skills.

Tulğan, B., & Pak Güre, M. D. 2024. **In the Echoes of Tomorrow: The Intersection of Social Work and Artificial Intelligence Through the Eyes of Turkish Students.** *Journal of Social Service Research*, 1-17.

This qualitative study on Turkish social work students' perspectives on the impact of artificial intelligence in social work explores the opportunities and challenges of the technology to the profession. Opportunities identified included innovation, access to information, and work optimization. Challenges include lack of emotional perspective such as empathy, ethical concerns, and negative effects on social work job count.

Victor, B. G., Kubiak, S., Angell, B., & Perron, B. E. 2023. **Time to move beyond the ASWB licensing exams: Can generative artificial intelligence offer a way forward for social work?.** *Research on Social Work Practice*, *33*(5), 511-517.

Practice questions from Bachelors, Masters, and Clinical Associate of Social Work Boards (ASWB) licensing exams were entered into ChatGPT. Results were analyzed to evaluate the use of artificial intelligence for tasks requiring recognition of text patterns related to social work, and to assess questions in the ASWB exam for potential flaws.

Cnaan, R. A. 1989. **Introduction: social work practice and information technology-an unestablished link.** *Computers in Human Services*, *5*(1-2), 1-15.

This examination of the minimal use of information technology in social work practice highlights the potential negative consequences for the profession if it continues.

Patterson, D. A., & Cloud, R. N. 2000. **The application of artificial neural networks for outcome prediction in a cohort of severely mentally ill outpatients.** *Journal of Technology in Human Services*, *16*(2-3), 47-61.

More on the creative commons license: click here.

This study of 196 outpatients receiving mental health services evaluates the use of artificial neural networks (ANNs) as a clinical decision support tool for predicting rehospitalization of severely mentally ill outpatients as both a dichotomous event, as well as rehospitalization frequency.

Quinn, A., Rycraft, J. R., & Schoech, D. 2002. **Building a model to predict caseworker and supervisor turnover using a neural network and logistic regression.** *Journal of Technology in Human Services*, *19*(4), 65-85.

This article supplies information on comparing, evaluating, and interpreting logistic and neural network tools by evaluating the models from these two quantitative methods on their ability to accurately predict employee turnover in a regional child protective services agency.

Steyaert, J. 1994. **Soft Computing for Soft Technologies: Artificial Neural Networks and Fuzzy Set Theory for Human Services.** *Computers in Human Services*, *10*(4), 55-67.

This article outlines neural networks and fuzzy logic, providing an overview and potential applications in the human services field.

Young, J. A., McLeod, D. A., & Brady, S. R. 2018. **The ethics challenge: 21st centursocial work education, social media, and digital literacies.** *The Journal of Social Work Values and Ethics*, *15*(1), 13-22.

This article eExplores the role of digital technologies in reshaping social work education, emphasizing their impact on professional training and the distribution of information. It aAdvocates for incorporating digital literacy into curricula to prepare students as ethically competent practitioners in a technology-driven world.

Critical Artificial Intelligence Literacy for Psychologists
