Some Publications on Social Work and Artificial Intelligence: Lauren's Version

Artificial intelligence is rapidly transforming social work by improving risk assessments, crisis intervention, and administrative efficiency, yet it also introduces profound ethical challenges such as algorithmic bias, privacy violations, and client misdiagnosis. To protect vulnerable populations, social workers must rely on established regulatory standards and codes of ethics while maintaining critical oversight rather than blindly trusting automated systems. Additionally, while AI offers innovative educational tools like personalized simulations to prepare future practitioners, its unchecked expansion threatens significant labor displacement and environmental degradation. Addressing these complex issues requires multidisciplinary strategies, including ethical governance, transparent protocols, and active human engagement to ensure technology serves human rights rather than corporate profit.

Ahn, E., Choi, M., Fowler, P. J., & Song, I. H. (2025). Artificial intelligence (AI) literacy for social work: Implications for core competencies. Journal of the Society for Social Work and Research, 16(1), 9–26.

DOI: https://doi.org/10.1086/735187

Description: Proposes a framework for AI literacy in social work education and practice. It maps AI competencies to Council on Social Work Education standards, enabling social workers to address algorithmic bias, technological shifts, and equity in human services.

An, R., & Lindsey, M. A. (Eds.). (2026). Artificial intelligence in social work: Bridging technology and humanity. Springer Nature.
https://link.springer.com/content/pdf/10.1007/978-3-032-18443-6.pdf

Description: An edited volume exploring cross-disciplinary AI integration across social work practice, clinical simulation, and research. It examines predictive risk modeling, virtual patient simulations, and algorithmic governance through human-centered and social justice lenses.

Garkisch, M., & Goldkind, L. (2025). Considering a unified model of artificial intelligence enhanced social work: A systematic review. Journal of Human Rights and Social Work, 10(1), 23–42.

DOI: https://doi.org/10.1007/s41134-024-00326-y

Description: Synthesizes 67 studies to map the landscape of AI scholarship in social work. It identifies empirical research gaps and proposes the Unified Model of Artificial Intelligence-Enhanced Social Work, grounded in human rights and the profession's triple mandate.

Lee, J. Y., Pace, G. T., Cha, H., Rao, S., Hahm, H. C., An, R., & Denby-Brinson, R. (2025). ETHICS: An ethical framework for artificial intelligence (AI) use in social work research. Journal of the Society for Social Work and Research, 16(4).

DOI: https://doi.org/10.1086/739116

Description: Establishes the ETHICS framework (Equity, Transparency, Human-Centeredness, Integrity, Collaboration, and Safety) tailored for social work researchers using AI and machine learning tools to protect marginalized populations and uphold professional values.

Reamer, F. G. (2023). Artificial intelligence in social work: Emerging ethical issues. International Journal of Social Work Values and Ethics, 20(2), 52–71.

DOI: https://doi.org/10.55521/10-020-205

Description: Explores ethical challenges arising from AI tools in social work clinical practice, risk assessment, and administration. It addresses algorithmic bias, informed consent, client privacy, machine-generated documentation, and evolving technology standards.

Rodriguez, M. Y., Goldkind, L., Victor, B. G., Hiltz, B., & Perron, B. E. (2024). Introducing generative artificial intelligence into the MSW curriculum: A proposal for the 2029 Educational Policy and Accreditation Standards. Journal of Social Work Education, 60(2), 174–182.

DOI: https://doi.org/10.1080/10437797.2024.2340931

Description: Proposes integrating a 10th core competency on Generative AI into the Council on Social Work Education (CSWE) accreditation standards. It outlines recommendations for MSW curricula to prepare students for ethical tool deployment and data stewardship.

Singer, J. B., Báez, J. C., & Rios, J. A. (2023). AI creates the message: Integrating AI language learning models into social work education and practice. Journal of Social Work Education, 59(2), 294–302.

DOI: https://doi.org/10.1080/10437797.2023.2189878

Description: Examines early integration of large language models like ChatGPT into social work education and field instruction. It highlights practical applications for drafting communication while critically discussing bias, accuracy, and academic integrity.

Victor, B. G., Sokol, R. L., Goldkind, L., & Perron, B. E. (2023). Recommendations for social work researchers and journal editors on the use of generative AI and large language models. Journal of the Society for Social Work and Research, 14(3), 563–577.

DOI: https://doi.org/10.1086/726021

Description: Provides guidelines for social work researchers and journal editors regarding the ethical use of generative AI and large language models. It emphasizes peer review transparency, authorship boundaries, and safeguarding participant data privacy.

Goldkind, L. (2021). Social work and artificial intelligence: Into the matrix. Social Work, 66(4), 372–374.
DOI: https://doi.org/10.1093/sw/swab028
Description: A seminal commentary examining the intersections of social work practice, big data, and artificial intelligence. It urges the profession to proactively engage with algorithmic technology and advocate against automated inequality.

Patton, D. U., Landau, A. Y., & Mathiyazhagan, S. (2023). ChatGPT for social work science: Ethical challenges and opportunities. Journal of the Society for Social Work and Research, 14(3), 553–562.
DOI: https://doi.org/10.1086/726042
Description: Analyzes the ethical challenges and potential opportunities of using generative AI tools like ChatGPT in social work science, advocating for community participation, contextual awareness, and rigorous oversight in technological adoption.

Boetto, H. (2025). Artificial intelligence in social work: An EPIC model for practice. Australian Social Work, 78(1), 1–14.
DOI: https://doi.org/10.1080/0312407X.2025.2488345
Description: Introduces the EPIC framework for integrating artificial intelligence into social work practice. It provides a structured approach balancing technological capabilities with ethical, person-centered, and socially just interventions.

Ricciardelli, L. A., Loy, A., & Bantry-White, E. (2025). Preserving the integrity of evidence-based social work in the age of AI: A proposed ethical framework. Journal of Evidence-Based Social Work, 22(1), 1–20.
DOI: https://doi.org/10.1080/26408066.2025.2587092
Description: Proposes an ethical framework to safeguard evidence-based social work practice in the era of artificial intelligence, emphasizing scientific integrity, human oversight, and the preservation of relational care.

Hodgson, D., Goldingay, S., Boddy, J., Nipperess, S., & Watts, L. (2022). Problematising artificial intelligence in social work education: Challenges, issues and possibilities. The British Journal of Social Work, 52(4), 1878–1895.
DOI: https://doi.org/10.1093/bjsw/bcab168
Description: Critically analyzes the challenges, ethical issues, and pedagogical possibilities of integrating artificial intelligence into social work education, urging educators to foster critical technological literacy among students.

Addison, S. M., Campion, E. D., Landsman, M. J., Rogalin, C. L., & Veeh, C. A. (2025). Making AI accessible to social work researchers: An exploratory analysis of using ChatGPT to screen articles for systematic and scoping reviews. Research on Social Work Practice, 35(1), 1–12.

DOI: https://doi.org/10.1177/10497315251357190
Description: Evaluates the accessibility and usefulness of generative AI tools like ChatGPT to help social work researchers screen academic literature for systematic and scoping reviews.

Yu, M.-H., & Rose, R. A. (2025). Algorithmic-assisted decision-making tools in child welfare practice: A systematic review. Research on Social Work Practice, 35(1), 1–15.
DOI: https://doi.org/10.1177/10497315251350933
Description: Conducts a systematic review of algorithmic-assisted decision-making tools utilized in child welfare systems, evaluating their predictive validity, implementation outcomes, and ethical implications for family outcomes.

Watts, K. J. (2025). Paying the cognitive debt: An experiential learning framework for integrating AI in social work education. Education Sciences, 15(1), 1304.
DOI: https://doi.org/10.3390/educsci15101304
Description: Presents an experiential learning framework to address "cognitive debt" in social work education, using critical pedagogy to transform AI tools into objects of inquiry across micro, mezzo, and macro practice.

Goldkind, L., Ming, J., & Fink, A. (2025). AI in the nonprofit human services: Distinguishing between hype, harm, and hope. Human Service Organizations: Management, Leadership & Governance, 49(3), 225–236.
DOI: https://doi.org/10.1080/23303131.2024.2427459
Description: Investigates the adoption of AI within nonprofit human service organizations, distinguishing between technological hype, potential harm to vulnerable clients, and opportunities for equitable organizational capacity.

Flaherty, H. B., & Krishnan, P. (2025). Refusing to fall behind: The ethical obligation to embrace AI in mental health social work. Journal of Evidence-Based Social Work, 22(1), 1–15.
DOI: https://doi.org/10.1080/26408066.2025.2553018
Description: Argues that mental health social workers have an ethical responsibility to adopt AI tools responsibly to enhance service delivery, improve outcomes, and prevent lagging behind digital health advancements.

Alam, N. (2025). Social work in the age of artificial intelligence: A rights-based framework for evidence-based practice through social psychology, group dynamics, and institutional analysis. Journal of Evidence-Based Social Work, 22(1), 1–12.
DOI: https://doi.org/10.1080/26408066.2025.2547219
Description: Outlines a rights-based framework for integrating artificial intelligence into evidence-based social work practice, drawing on social psychology, group dynamics, and institutional analysis to protect human rights.

Reimer, E. C. (2024). Examining the role of generative AI in enhancing social work education: An analysis of curriculum and assessment design. Social Sciences, 13(12), 648.

DOI: https://doi.org/10.3390/socsci13120648

Description: Analyzes curriculum and assessment design strategies for incorporating generative AI into social work higher education, evaluating ways to enhance student learning while maintaining academic rigor.
